Professional Summary

Full Stack Developer with 2+ years of professional experience at INSTICC, building and maintaining internal platforms and information systems using JavaScript/Node.js on the backend and React, HTML, and CSS on the frontend. Day-to-day work spans database design (relational and non-relational), requirements writing, code refactoring, and system architecture decisions.

I am also a founding member of Code Lusitan, a growing initiative driven by a team of professionals passionate about technology and innovation. Our mission is to transform ideas into impactful digital solutions that empower business growth and drive technological evolution.

Currently expanding my knowledge in Python, AI development with Python, and plan to advance my skills in Cybersecurity. My long-term goal is to pursue a Master's degree in Software Engineering, enabling me to design and architect scalable, intelligent, and secure software systems.

Adaptable, collaborative, and focused on quality, I aim to contribute to meaningful projects that combine innovation, technical expertise, and problem-solving.

Professional Experience

Software Engineer

2023-05-21 - Present

[INSTICC | Setubal, Portugal](#)

Built and maintained backend services and RESTful APIs primarily in JavaScript/Node.js, handling both feature development and long-term code quality through refactoring and performance improvements.

Designed and optimized database schemas for both relational (SQL) and non-relational (NoSQL) databases, selecting the appropriate model based on data structure and access patterns for each project.

Wrote functional and technical requirements, bridging the gap between business needs and implementation.

Developed frontend interfaces using React, HTML, and CSS, ensuring cross-browser compatibility and a consistent user experience.

Conducted code reviews and applied refactoring practices to reduce technical debt and improve maintainability across the codebase.

Projects

SCManagement

Technologies: .NET, C#, RESTful APIs, SQL Server, HTML/CSS,

Web application built with .NET/C# for managing sports clubs, athletes, and training plans. Integrated data analytics features to replace manual reporting and exposed RESTful APIs for cross-module data sync.

ProtectU

Technologies: Android Studio, Java, React Native, Geolocation API, Firebase, RESTful APIs, SQLite, Push Notifications, UI/UX Design

Cross-platform mobile app in Java and React Native that delivers real-time geolocation-based disaster alerts. Used Firebase for cloud storage, SQLite for offline support, and push notifications for time-critical communication.

Only Imagination

Technologies: C#, SQL

City-building game developed in C# set in a post-apocalyptic world, featuring resource management mechanics and a mini-game for acquiring building materials.

Luxury Wheels

Technologies: Python, CSS, HTML, SQLite

Web application for luxury car rentals, built with Flask and SQLite. Features vehicle browsing by type, category, and brand, user authentication, reservation management, and payment method handling, all served through a generic REST API layer auto-registered from the data models.

Education

During my degree in Informatics Engineering at the Instituto Politécnico de Setúbal (2020–2023), I completed several impactful academic projects that strengthened my technical foundation and practical problem-solving skills.
